

NP30S is designed for compacting wet waste in a plastic bag. Other material such as cardboard, paper and soft plastics for recycling purposes can also be compacted, with or without a sack.

The NP30S works quietly, is fast, safe and easy to operate. The waste is loaded through the front feed door. After closing the door, the waste is compacted up to 95% of its original volume!

When the baler is full, this is indicated and the sack/bale is easily ejected by the built in ejection.

When the baler is not in use, the press ram can be left in its pressure mode against the bale - even overnight - which efficiently draws excess air out of the bale, making it even more compact.

The NP30S is used by industries, shops, fast food outlets, canteens, petrol stations, airports, shipping industry and other similar establishments.

The NP30S requires a minimum of floor space and can easily be relocated. Reliable, silent-running mechanical operation with low maintenance requirements - and no hydraulic oil.

*Plastic sack for handling of wet waste*

*The built in ejection makes it simple to remove the sack or bale from the machine*

# NVA COMPACTOR NP30S

- No waste of space -

NVA has produced more than 15,000 balers since the mid 60s.

Load the material through the feed door at the front and the waste is compacted. When the blue lamp is indicating ready bale/sack, open the main door for ejection.

Press type	Pressure	Weight	Depth	Feed Opening	Bale size mm			Bale weight	dB(A)
	kN	kg	mm	mm	Length	Width	Height	kg	
NP30S	60	300	692	520x460	550 x 550	450-650		35-80	59±1

Voltage: 3x400 V in standard version - other voltages available. 10 A slow fuse.

We reserve the right to introduce technical alterations.
